## **Environmental policy**

DW Mouldings is committed to conserving the Earth's resources and to do what it can to reduce any negative effects it has on the environment. Employees are required to use the equipment and materials wisely and reduce wastage where possible. Employees can play a positive role in helping the environment by recycling all non-confidential waste, using printers and photocopiers with care and switching off electrical equipment which is not in use.

DW Mouldings recognise that we have a responsibility to base our operations upon well-managed forests. Verification by one of the accredited, independent certification contractors is a preferred means of proving that wood goods actually possess the environmentally friendly attributes claimed for them. The company submits itself to independent scrutiny through our efforts to maintain Environmental Chain of Custody certification with BM Trada as part of our ongoing commitment to the environment.
